1. This Office action is in response to application filed 26 June 2003 and IDS filed 10 May 2004, which papers have been placed of record in the file.

2. An informal examiner's amendment to correct a typographical error in the specification appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

On p.10, line 10, change "452 to 457" to --252 to 257--.

3. Claims 1-10 are allowed over the prior art of record. The following is an examiner's statement of reasons for allowance:

Claims 1 and 7 are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose a method and device comprising guiding the sensor substantially based on a parametric model that defines both a generally lateral position scale for the reference frame, and on a first curved parametric profile defined relative to the position scale and having a contiguous concavity range wider than the sensor, as presented in the environment of claims 1 and 7. It is noted that the closest prior art, Chang et al., shows repeatable runout compensation using first and second sets of polynomial coefficients similar to the claimed invention. However, Chang et al. fails to disclose guiding the sensor substantially

based on a parametric model that defines both a generally lateral position scale for the reference frame, and on a first curved parametric profile defined relative to the position scale and having a contiguous concavity range wider than the sensor as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Melrose et al. Figures 7-9 and Lamberts et al. Figure 6 show repeatable runout correction similar to applicant's invention. Wang et al. Figures 2-3 show a control system similar to applicant's invention.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James L Habermehl whose telephone number is (703)305-6975. The examiner can normally be reached on 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Hudspeth can be reached on (703)308-4825. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
